Charukesh Panjala

Software Engineer | 6 Yrs · Fintech · Amazon · AI | Berlin | Open to Work

Berlin, Berlin, Germany

Summary

Fintech. Fraud detection. AI. Six years across all three, and I'm just getting started. It didn't start with code. I started at [24]7.ai, working close to customers and digital platforms. Then COVID hit, plans changed, and I ended up at Amazon investigating digital transaction fraud, reviewing cases, feeding patterns back into detection systems, watching how large systems fail from the inside. That's when it hit me: I didn't want to just watch the systems. I wanted to build them. So I started from scratch. Picked up coding, joined internships, broke things, fixed things. MountBlue taught me I could build end-to-end real apps, real clients, real pressure. That's when something clicked: nothing is that hard. You can learn anything. You can ship anything. That confidence took me to Ordway, a fintech SaaS platform where I spent nearly 3 years building billing and invoicing infrastructure. Rails, React, PostgreSQL. One fix I'm proud of: took an API from 20 seconds to 3 seconds across thousands of customer records. Replaced nested loops with clean DB queries. Boring fix, big impact. Now I'm in Berlin, doing my Master's in Software Engineering and building AI-powered projects on the side while levelling up my skills. Actively learning: AI agents, LLM APIs, RAG, Docker, CI/CD. Stack: Rails · React · Node · TypeScript · PostgreSQL · MongoDB Languages: English · Hindi · Telugu · German (improving) If you want someone who picks things up fast and owns problems end to end, let's talk.

Experience

Ordway - Billing and Revenue Automation

Software Engineer

August 2022 - April 2025 (2 years 9 months)

Ordway is a fintech SaaS platform for billing and revenue automation used by finance teams globally.

- Built and shipped billing and invoicing features end to end Rails APIs, React UI, PostgreSQL schema design and migrations
- Optimised a critical API from 20s → 3s response time across thousands of customer records by replacing nested loops with targeted database queries one of the highest-impact performance fixes on the platform
- Built customer-facing dashboards and internal admin workflows for finance operations teams
- Worked directly with customers to diagnose and correct revenue recognition and billing data issues
- Participated in quarterly roadmap planning, sprint ceremonies, story and epic scoping
- Conducted code reviews, wrote tests, and onboarded and mentored teammates
- Operated full-stack across the entire SDLC

MountBlue Technologies

Software Engineer

March 2022 - July 2023 (1 year 5 months)

Bengaluru

- Built full-stack web applications from scratch for client and internal training projects
- Developed web applications using Node.js, React.js, MongoDB, JavaScript and TypeScript, ensuring robustness and scalability.

V One Technologies

Full Stack Developer Intern

April 2021 - January 2022 (10 months)

Hyderabad

- Supported development of internal tools using React.js and Node.js
- Fixed bugs, shadowed senior engineers, and built foundational full-stack skills

Amazon

Transaction Risk Investigator Engineer

March 2020 - March 2021 (1 year 1 month)

Hyderabad

- Investigated digital transaction fraud across multiple risk types like payment fraud, account takeovers, and transaction anomalies, through both manual case review and escalated automated system alerts
- Fed identified fraud patterns back into Amazon's detection systems, directly improving the accuracy of automated risk models

- Built and used forensic analysis frameworks to identify root causes of security incidents across high-volume payment flows

[24]7.ai

Digital Experience Engineer

August 2018 - October 2019 (1 year 3 months)

Hyderabad

- Provided technical support and troubleshooting for customer-facing digital platforms
- Maintained and improved frontend interfaces based on user feedback and usability testing

Education

University of Europe for Applied Sciences

Master's degree, Computer Software Engineering · (March 2025)

Bharat Institute of Engineering & Technology

Bachelor's degree, Computer Science · (August 2014 - July 2018)
